

FLEXIBLE EQUIPMENT FOR FULL SLEEVE LABELING IN HORIZONTAL LAYING

FEATURES

Flexibility for limited series and frequent changes

A design that promotes flexibility and facilitates format changeover

Flexibility in all its aspects to manage packaging of multiple shapes, sizes, weights and materials, to easily change from a round to a square box of confectionery, from a mascara to a lipstick, from a round vial to a medical device, from a pen to a felt-tip pen or brush. Each format has its own dedicated tooling that can be changed in situ without adjustment. The conveyor carriers can hold several product shapes and are easy to change with no tooling required. The format is stored in the two drawers of the machine for easy access.

A machine designed for the operator, their safety and efficiency

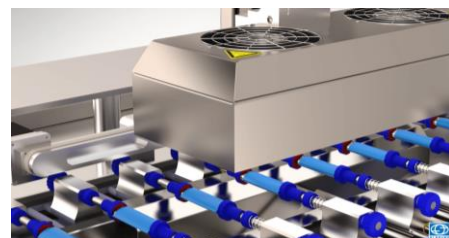

Ergonomic design and intuitive interface for easy operation

The 360° rotating HMI allows the operator to work either on the left or on the right side of the machine and can memorize up to 20 pre-set formats. On each side, a single transparent housing provides a perfect view of the interior and its wide opening gives direct access to the full production process. It is easy to change the gripping tips of the product rotation system or to control the shrink applicator.

Multiflexskinner shrink technology

A unique finishing quality to enhance your products

A continuous motion rotary system prevents the products from coming into contact with the conveyor belt. There is a preheat module to prepare your product. The infrared shrink applicator and the hot air nozzle guarantee the quality of shrinkage and finishing. The product gripping tips are removable and can be adapted to different shapes (round, square, oval) to ensure a good shrink result. This technology can use sleeves of last generation to reduce the energy consumption and allow the packaging to integrate the flows of the valorized recyclability.

An ultra-compact all-in-one horizontal installation concept, in line or off line

Equipment designed for an optimized work space

An all-in-one concept that allows decoration or security and traceability for unstable products, in small sizes, with horizontal application and is equipped with an adapted preheating and infrared shrink technology and hot air nozzle. This ultra-compact equipment is designed to operate in line or off line.

OPTIONS

Coding systems to meet your different traceability needs

Adhesive labels for personalization

An adapted product supply in line or off line

A large capacity sleeve unwinder

SPECIFICATIONS

Informations non contractuelles

Machine

Conveyor height	920 mm
Speed	80 - 100 cpm
Steam pressure	6 bars
Electrical consumption	7 - 22 kW/H

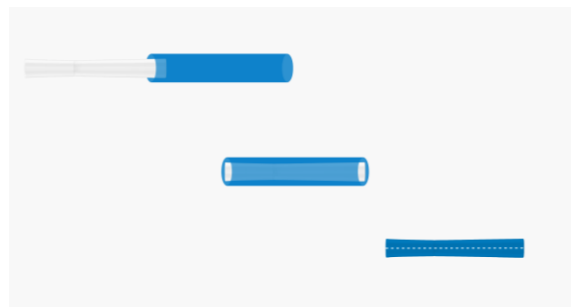

Packaging

Materials	PET, Glass, HDPE, PP, Metal
Shapes	Cylindrical, oval, square, special
Products diameter	4 - 50 mm
Products height	65 - 150 mm

Sleeves

Applications	Full body, partial sleeve, tamper evidence
Type of films	PET, RPET, TPEG
Films thickness	20 - 75 microns
